### **Prerequisites:**

\* Students who plan to complete the program in 8 months [two trimesters] should take these two professional skills courses, as they may not be available next trimester (plus the first course in the credential series). Please see your coach with any questions.

\*\* The first credential course is only open to students who have mastered, or are concurrently taking and on track to master, a minimum of one (1) Professional Skills course.

\*\*\* The second of the credential courses is only open to students who have mastered a minimum of one professional skills course and the first course in the credential series, and have already taken and mastered, or are concurrently taking and on track to master a second professional skills course.

## **Course Introductions**

Below is an introduction to the courses available for the Fall 2021 trimester.

### **PRO-101: Managing Yourself at Work**

Managing Yourself at Work focuses on learning how to organize yourself to be efficient and effective, as well as learning how to be resilient, have a positive attitude, and have a growth mindset. The course also addresses topics such as how to be proactive at work, the nature and importance of personal responsibility and conscientiousness, how to set and achieve goals, and how to assess how well one is functioning at work.

### **PRO-103: Practical Problem Solving**

In Practical Problem Solving, students learn a set of general heuristics that allow them to frame and solve a wide range of different types of problems. We teach methods for identifying and characterizing problems, for using divergent and convergent thinking, for reframing problems, and for prioritizing potential solutions. Part of this course focuses on heuristics for devising creative solutions to ill-formed problems.

### **PRO-105: Working with Others**

Skills that help people to work with others—including relationship management, working in teams, and communication skills—are already in high demand among employers, and will be in even higher demand in the coming years. In this course, students build these important skills and learn how to apply them at work. Students learn key aspects of how to behave professionally, how to participate in and run meetings, how to collaborate with others effectively, how to receive and give feedback, negotiation techniques, the problem of implicit bias in the workplace, and the value of diversity and inclusion.

**BUS-211: Salesforce Admin Super Set Foundations**

The Salesforce Admin Super Set Foundations course is the first in a two-course sequence that prepares students for an entry-level Salesforce administrator position. Students learn the basics of the Salesforce platform and become familiar with the vocabulary, functions, and interface of the Salesforce software. The curriculum consists of learning to create and modify reports and dashboards, manage access to information to ensure data security, customize an organization's data model, and manage users. Students also work to earn the first of three Salesforce Admin Super Set "Superbadges," the Business Administration Specialist Superbadge.

**BUS-212: Salesforce Admin Super Set Skills**

During the Salesforce Admin Super Set Skills course, the second in the two-course Salesforce-related sequence, students continue to build their knowledge of the Salesforce ecosystem. They continue to build reports and dashboards, learn to set up a mobile interface, build their own apps to achieve company goals, learn and deploy industry-standard identity and access management tools, and customize an organization's Salesforce platform to achieve business goals. Students also work to earn the second two of the three Salesforce Admin Super Set "Superbadges," the Lightning Experience Reports & Dashboards Specialist and the Security Specialist.

**BUS-215: Project Management Foundations**

The Project Management Foundations course is the first in a two-course sequence that prepares students for an entry-level project management position. The course provides the foundational knowledge to enter this growing job field while building practical skills for on-the-job application. Students will learn how to initiate, plan, schedule, budget, execute, monitor, and document projects from beginning to end, for small to medium-sized projects.

**BUS-216: Project Management in Practice**

During the Project Management in Practice course, the second in the two-course project management-related sequence, students will continue to work toward preparing for an industry-recognized credential: CompTIA Project+, which demonstrates core foundational project management knowledge and skills, and they will also produce a new product prototype using Agile project management methodology. Students will also learn how to combine the different project management methodologies into a hybrid approach, giving them a versatile and unique set of skills and tools to manage projects of various sizes across different industries.
